Q3(a) – Chapter: Congruence, Similarity & Geometrical Proof

Family: Use length scale factor in similar figures • Variant: Find a corresponding length in similar triangles

MethodThe scale factor from triangle ABC to PQR is $PQ/AB=12/4=3$.*Why: Corresponding lengths in similar triangles have a constant ratio.***Method** $BC=16.5/3=5.5$ cm.*Why: Divide the corresponding length by the scale factor.***Final answer****BC:** 5.5 cm

November 2021 | Question 4 | 2 marks

Family: Use length scale factor in similar figures | Variant: Find a corresponding length in similar triangles

METHOD / WORKING

1. The scale factor from triangle DEF to triangle ABC is

2. $\frac{AC}{DF} = \frac{45}{20} = 2.25$

3. $AB = DE \times 2.25 = 36 \times 2.25 = 81$

4. Given $BC = 54$,

5. $EF = \frac{54}{2.25} = 24$

6. Answer: $AB = 81\text{cm}$, and $EF = 24\text{cm}$.

FINAL ANSWER

AB=81 cm, and EF=24 cm.

Given that $BC = 54\text{ cm}$,

(b) work out the length of EF .

Worked solution

November 2025 | Question 4 | 3 marks

Family: Use length scale factor in similar figures • Variant: Find corresponding lengths in similar polygons

Solution

The scale factor from the largest quadrilateral to the middle quadrilateral is

$$(7)/(28)=\text{frac}14$$

So the side corresponding to 60 cm in the middle shape is

$$60 \times \text{frac}14=15$$

The scale factor from the middle quadrilateral to the smallest quadrilateral is

$$(6)/(18)=\text{frac}13$$

$$JK=15 \times \text{frac}13=5$$

Answer: 5 cm.
