Answer key

Use the question number shown on each page.

- Q001** Values 2 to 12 have frequencies 1,2,3,4,5,6,5,4,3,2,1 over 36; $P5 \leq X \leq 8 = 20/36 = 5/9$.
- Q002** Use the sample space or combination to list every possible X and sum the relevant probabilities.
- Q003** Use binomial or hypergeometric counts, then add probabilities for the requested values.
- Q004** For four fair coins $EX=2$; for the hypergeometric draw $EX=4/3$.
- Q005** Use $EX = \sum xPX = x$ after constructing each distribution.
- Q006** Compute each mean from its probability distribution; symmetry gives quick checks for fair cards and dice.
- Q007** Use $E(aX + b) = aEX + b$; calculate EX^2 directly from the table.
- Q008** Apply linearity for $aX+b$ and use the weighted square sum for X^2 .
- Q009** For every expression use $E(aX + b) = aEX + b$; evaluate powers from the distribution table.
- Q010** $EX = 6/7$; $VX = 20/49$.
- Q011** Construct each probability table, then use $VX = EX^2 - EX^2$.
- Q012** Use the distribution table for each experiment and the variance identity.
- Q013** The table gives $VX = 24/49$, so $\sigma X = 2 \sqrt{6/7}$.
- Q014** Use $\sigma X = \sqrt{V(X)}$ after evaluating the variance from the table.
- Q015** Compute EX , EX^2 , then $\sigma X = \sqrt{E(X^2) - E(X)^2}$.
- Q016** Use $V(aX + b) = a^2 VX$ and $\sigma(aX+b) = |a| \sigma X$.
- Q017** Apply the squared multiplier to VX and the absolute multiplier to σX .
- Q018** Use the variance and standard-deviation transformation formulas for each Y .
- Q019** Use $E(aX + b) = aEX + b$ and $\sigma(aX+b) = |a| \sigma X$, with $a > 0$.
- Q020** Model the payout as $Y = aX + b$, then apply the mean and standard-deviation rules.
- Q021** Express every quantity as $Y = aX + b$ and use the appropriate mean, variance or standard-deviation rule.
